

Robotic Process Automation (RPA)

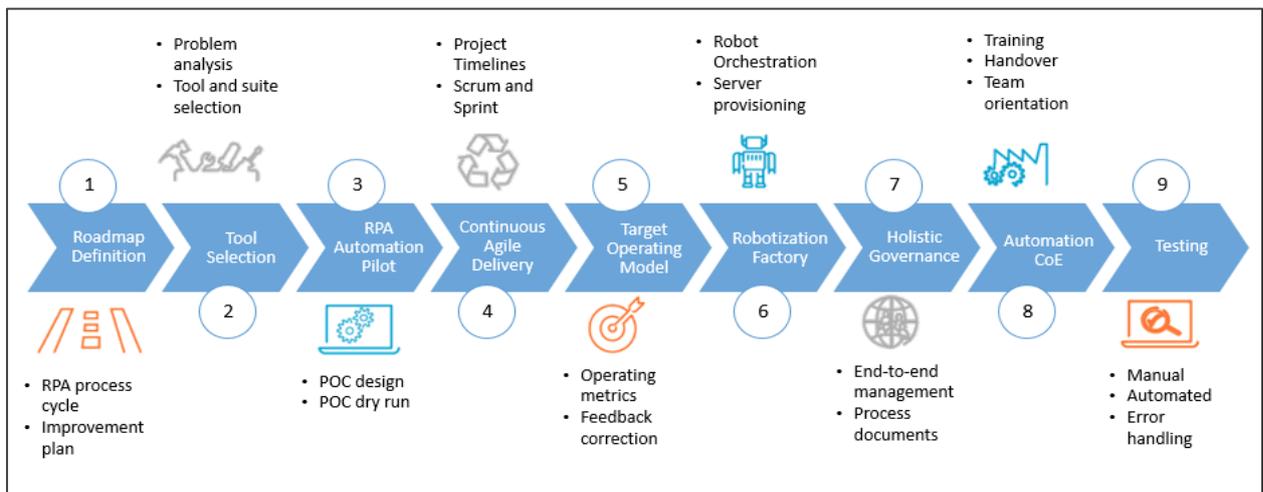

Overview

Robotic Process Automation (RPA) is a critical component of 'Future of the Work' and refers to a style of automation where a machine, or computer, mimics a human's action in completing rules based tasks. R Systems enhances the productivity, reduces the cycle time and improves accuracy for any business process through RPA services. Our RPA capabilities help to overcome the following challenges of digital world:

- Navigate towards financial confidence
- Apply key operational innovations
- Continually adopt technology - in changing digital environment
- Burdened with repetitive and time consuming processes
- Reduce cost, improve delivery and ensure consistent quality

RPA Implementation Methodology

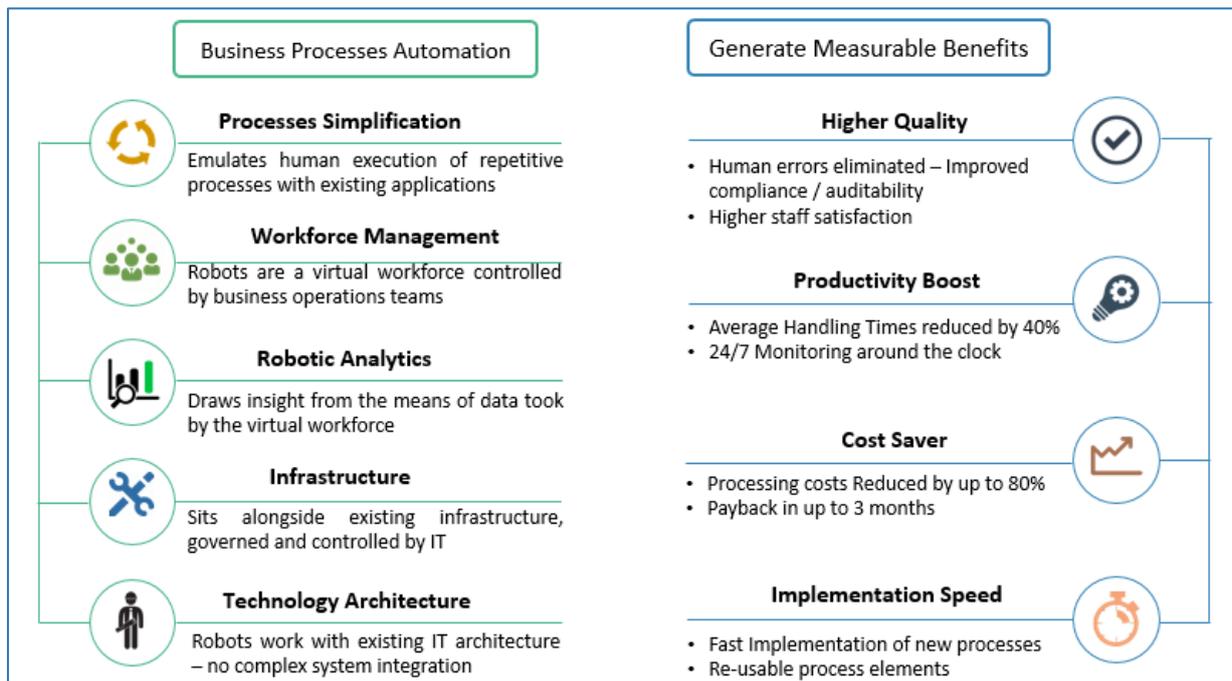

Robotic Process Automation (RPA)

Tools Exposure

We have proven experience with industry leading tools Automation Anywhere, Blueprism and UiPath. R Systems partnered with Automation Anywhere Enterprise to implement RPA, as it provides best front-end UI automation, top security, scalability and usability features.

What We Do

Partnership

We are the Silver partner of **Automation Anywhere** (Leading RPA Tool). Automation Anywhere is a developer of robotic process automation (RPA) software. Automation Anywhere Enterprise product combines traditional RPA with cognitive elements such as natural language processing and reading unstructured data.

About R Systems

R Systems is a global leader in technology, data and AI/analytics services. We deliver AI-driven solutions to clients and fuel their digital transformation. With a global workforce of 2750+ employees spread across 16 delivery-centers and 25+ offices, we continue to empower organizations with cutting-edge technologies since 27+ years.
